### Order

New Delhi, the 10th August, 2010

S. O. 1945(E).— In exercise of the power conferred by Section 3 of the Essential Commodities Act, 1955 (10 of 1955), the Central Government hereby makes the following Order further to amend the Fertiliser (Control) Order, 1985, namely:—

1. (1) This Order may be called the Fertiliser Control (Fourth Amendment) Order, 2010.

(2) It shall come into force on the date of its publication in the Official Gazette.

2. In the said order,—

(a) in Schedule I, in Part A, under the heading specification of fertilizer, in sub-

-heading 1(a) Straight Nitrogenous Fertilisers, after serial No. 10 and entries relating thereto, the following serial number and entries shall be inserted, namely:—

“11 Neem Coated Urea

(1) Moisture per cent by weight, maximum — 1.0

(2) Total nitrogen per cent by weight, minimum — 46.0

(3) Biuret, per cent by weight, maximum — 1.5

(4) Benzene soluble content, per cent by weight, minimum — 0.035

Particle Size: Not less than 90 per cent of the material shall pass through 2.8mm IS sieve and not less than 80 per cent by weight shall be retained on 1mm IS sieve.”

(b) in Schedule II, in Part B under sub-heading “3. Determination of nitrogen”, after Item number (xvi), the following items shall be inserted namely:—

(xvii) Determination of oil in Neem Coated Urea.

Principle:- Oil present in Neem coated urea is extracted with solvent benzene and separated from the aqueous phase. The solvent layer is then evaporated and the residue is weighed as oil.

Reagents: (i) Benzene-AR/GR Grade.

(ii) Dilute HCl : Prepare 1 : 1 HCl by adding 100ml. conc. HCl to 100ml. distilled water.

Procedure:—

- (i) Weigh accurately about 200gm Neem coated urea and transfer it to a 1000ml. separating funnel.
- (ii) Add about 250 to 300ml. warm distilled water and shake gently to dissolve urea.
- (iii) Add 50ml. benzene and acidify with 5ml. dil. HCl. Mix well and separate the oily benzene layer.
- (iv) Repeat the extraction of oil from the aqueous layer with fresh 50ml. benzene and mix the oily benzene layer with that obtained in step (iii).

(v) Give washings to this oily benzene with warm distilled water till it is completely free from urea.

(vi) Transfer the benzene layer to an oil free 100ml. beaker. Give 2-3 washings to the separating funnel with about 10ml. benzene each time to transfer completely the oil from the separating funnel to the beaker.

(vii) Heat the contents in the beaker on a water bath to break any emulsion formed. Filter this oily layer into another previously weighed 100ml. beaker. Give two to three, 10ml. benzene washings to the filter paper to transfer the oil completely into the weighed beaker.

(viii) Evaporate benzene by keeping beaker on a water bath at 105°C for about two hours. Cool in a dessicator and weigh the contents to a constant weight. Find out the weight of this oil in the beaker.

(ix) Carry out a blank test with benzene (with equivalent amount consumed in the test) for oily content present, if any, and subtract the same from the test results.

Calculation:—

Benzene Soluble Contents (oil), ppm  

$$= 1000 \times (W - W_b) / W$$

Benzene soluble contents (oil), % =  $(W - W_b) / 10W$

Where W is the weight of the oil in the beaker, in mg

$W_b$  is the weight of oil (in mg) in the blank, and

W is the weight of the sample taken in gm.
